This lab may incorporate AI tools to support your learning.

Overview

In this lab, you will deploy an Agentspace app connected to a Google Drive data store and use the AI assistant to locate information from within your organization.

For this lab, you'll take on the role of a scientific conference organizer planning a conference to discuss the discovery of exoplanets and exoterra-

Note: To avoid confusion between your professional Google Identity and any other temporary Qwiklabs student accounts, it is strongly recommended that you utilize a new Incognito window for the Google Cloud console and Google Drive tabs you will use in this lab. To do this easily in Chrome, after starting the lab, right-click on the "Open Google Cloud console" button and select "Open link in Incognito window".

Lab instructions and tasks —/100

Overview

Objectives

Setup and requirements

Task 1. Add content to Google Drive and Google Calendar

Task 2. Configure an Identity Provider

Task 3. Create Google Drive and Google Calendar Data Stores

Task 4. Deploy an Agentspace app

Task 5. Set up an OAuth Consent Screen and Create client

Task 6. Enable a Google Calendar Action

Task 7. Summary

Next >

Objectives

In this lab, you learn how to:

- Configure AI Applications authentication
- Create a Google Drive data store
- Create an Agentspace app
- Use the AI assistant to find, summarize, and extract content from a data store
- Create a calendar invite with an assistant action

Setup and requirements

Before you click the Start Lab button

Read these instructions. Labs are timed and you cannot pause them. The timer, which starts when you click **Start Lab**, shows how long Google Cloud resources will be made available to you.

This Qwiklabs hands-on lab lets you do the lab activities yourself in a real cloud environment, not in a simulation or demo environment. It does so by giving you new, temporary credentials that you use to sign in and access Google Cloud for the duration of the lab.

What you need

To complete this lab, you need:

- Access to a standard internet browser (Chrome browser recommended).
- Time to complete the lab.

Note: If you are using a Pixelbook, open an Incognito window to run this lab.

How to start your lab and sign in to the Google Cloud Console

1. Click the **Start Lab** button. If you need to pay for the lab, a pop-up opens for you to select your payment method. On the left is a panel populated with the temporary credentials that you must use for this lab.

Open Google Console

Caution: When you are in the console, do not deviate from the lab instructions. Doing so may cause your account to be blocked. [Learn more.](#)

Username
google1e2727032_student@qwiklabs.n

2. Copy the username, and then click **Open Google Console**. The lab spins up resources and then presents a tab that shows the Sign in page.

Tip: Open the tabs in separate windows, side-by-side.

If you see the **Choose an account** page, click **Use Another Account**.

3. In the **Sign in** page, paste the username that you copied from the Connection Details panel. Then copy and paste the password.

Important: You must use the credentials from the Connection Details panel. Do not use your Qwiklabs credentials. If you have your own Google Cloud account, do not use it for this lab (avoids incurring charges).

4. Click through the subsequent pages:

- Accept the terms and conditions.
- Do not add recovery options or two-factor authentication (because this is a temporary account).
- Do not sign up for free trials.

After a few moments, the Cloud Console opens in this tab.

Task 1. Add content to Google Drive and Google Calendar

1. Navigate to **Cloud Storage > Buckets** and click on the existing bucket with the name: **GCP Bucket**.
2. Download the files listed below to your local system to use as demo data:
 - PlanetCon_Persephone.docx
 - Persephone Analysis Report.pdf
3. In the Incognito window where you have logged into the Google Cloud console, create a new tab and navigate to drive.google.com.
4. Create a new folder in your Qwiklab student account's drive and name it **PlanetCon: Persephone**.

created in Google Drive named **PlanetCon: Persephone**. These documents relate to the imaginary discovery of a new planet named "Persephone" and the organization of a conference planned for the scientific community to discuss it.

6. In the same Incognito window, create a new tab, and navigate to calendar.google.com. Accept or dismiss any pop-ups.
7. Ensure you are authenticated as your Qwiklabs student account by clicking the "s" in the circle in the upper right corner and confirming it is your student-...@qw1klabs.net account.

9. In the event-creation window that appears, name the event as **Astronomers Lunch Planning Meeting**, and set a start time of at least one hour from now.

10. Select **Save**.

Click *Check my progress* to verify the objective.

1. In the Google Cloud Console, navigate to the **Agentspace** landing page by searching for it at the top of the console.
2. On the **Agentspace** card, click **Manage**.

3. You will be sent to **AI Applications**. Click **CONTINUE AND ACTIVATE THE API**.

Task 4. Deploy an Agentspace app

1. From the AI Applications menu, select **Apps** from the left-hand navigation pane.
2. Select **+ CREATE APP**.
3. Find the **Agentspace** card and select **CREATE**.

Agentspace

PREVIEW

Build an enterprise compliant search and assistant tool. Powered by Gemini, your employees can easily find answers in vast amounts of company data, automate content creation, and execute tasks with connected apps, all from a single interface.

CREATE

5. For a company name, use `Scientific Conferences`.
6. Under the "Select tier" header, select **Search + Assistant**.
7. Select **CONTINUE**.
8. For connected data stores, select the checkbox for the **Google Drive** and **Google Calendar** data stores you created earlier.
9. Select **CREATE**.

Click **Check my progress** to verify the objective.

Deploy an Agentspace app.

Check my progress

Screen and Create client

In order for the AI assistant to take actions on a user's behalf, the user must grant access to your enterprise search and assistant app. To configure the OAuth consent screen and client, follow the following steps:

1. Navigate to the **Google Auth Platform**.

Google Auth Platform X Search

SEARCH RESULTS

 Google Auth Platform
OAuth configuration and credentials

 Verification Center
Google Auth Platform

 Airflow
Google Click to Deploy containers

- Signing in users with Google | Identity Platform ...
This document shows you how to use Identity Platform to sign in.
- FileMage SFTP, FTP, & Web Portal Uploads to Google Cloud Storage
FileMage
- Using Google authentication | Apigee
Apigee supports using Google OAuth tokens or OpenID Connect.
- Transfer General
Server General

2. Click **GET STARTED**.

3. For **App Name**, enter **Scientific Conferences Agentspace**.

4. For the **user support email**, select your Qwiklabs student account.

5. Select **Next**.

6. In the **Audience** section, select an **Internal Audience**.

7. Select **Next**.

8. In the **Contact Information** section, provide an email address, which can be your real professional email address or your Qwiklabs student account.

9. In the **Finish** section, agree to the terms.

10. Select **Create** to create your OAuth consent screen.

11. Your Google Auth Platform dashboard will display a banner that you haven't created any clients yet. Select **Create OAuth Client**. If you don't see this banner, select **Clients** on the left and then **+ Create Client**.

12. Select an **Application type** of **Web application**.

13. **Name** the client **Agentspace Client**.

14. Under **Authorized redirect URIs**, add <https://vertexaisearch.cloud.google.com/oauth-redirect>

15. Click **Create**.

16. When the client is created, click the **Download** button at the end of its row to display the **Client ID** and **Client Secret** values. Store these in a text document, as you will need them shortly to enable actions.

Click **Check my progress** to verify the objective.

Task 6. Enable a Google Calendar Action

To configure the action, you'll need to enable the **Google Calendar API**. To do so:

1. In the search bar at the top of the Cloud Console, search for the **Google Calendar API** and select it.

- ☐ **Create calendar event**
Schedules new Google calendar events

FINISH SETUP CANCEL

9. Enter the **Client ID** and **Client Secret** of the OAuth client you created above.

10. Select the checkbox to enable the **Create calendar event** action to allow the assistant to create meetings based on requests in the Agentspace search bar.

11. Click **FINISH SETUP**.

Click **Check my progress** to verify the objective.

Enable a Google Calendar action.
[Check my progress](#)

Task 7. Query your Agentspace Assistant

1. Take a 10-minute break for the app, its data stores, and actions to finish creating. You can see that your action is finished creating when you select `calendar_action` from the app's Actions menu and see that it has a connector state of `Active`.

	calendar_action
Collection ID	calendar-action_1745635312059
Type	Calendar
Region	global
Connected apps	N/A
Connector state	Active
Automatic Synchronisation	Enabled

3. Select **Preview** from the left-hand navigation pane to view the experience your users will see.

4. This home page is designed to give users easy access to the content and events they will find most useful. You will see a few sections:

- **Agents:** Use some Google-provided agents or create your own to help with tasks like research, iterating on ideas, or more.
- **Prompts:** Get suggestions for ways you can use the AI Assistant.

events. You should now see the **files you added to your Drive** and the upcoming **Astronomers Lunch Planning Meeting** you created.

Note: If your data stores are still indexing, the files may require a little time to become accessible.

5. In the search bar, enter the following query: `what topics will be discussed at planetcon?`

6. You should see an answer as well as relevant documents in the side bar.

8. Enter a different prompt in the primary search bar: `what is the size of Persephone compared to Earth?`

9. You should see a result that extracts the information you are looking for from the **Persephone Analysis Report.pdf** document you uploaded to your drive. Remember, there is no real exoplanet Persephone, so you know the model is not relying on training data, but is finding information in your uploaded data. You can further validate this by clicking the **link icon** and the card that appears below the response to be taken directly to the file that serves as the source of this information.

10. Click the **Google Agentspace** logo again to return to the homepage.

assistant to create a useful summary for you. In the search bar, enter the following query: `summarize the document Persephone Analysis Report.`

12. Review the assistant's response.

13. In the search bar, enter the following: `Create a 1-hour meeting tomorrow at 10am for exoplanet-research@qwiklabs.net to review conference presentation proposals.`

14. The assistant will prepare a template calendar event for you to approve.

15. **Authorize** the application using the OAuth Consent Screen you configured using your Qwiklabs student account.

calendar.google.com in a new tab).

Task 8. Open the hosted link to your application

1. From your AI Applications app's menu, select **Integration** from the left-hand navigation pane.
2. Under **The link to your web app**, click **OPEN** to preview the hosted application. This is the application for your organization. When configuring Agentspace in production, you could use a DNS record to configure this home page to be accessible from a subdomain of your website, like `agentspace.my-domain.com`.

Congratulations!

In this lab, you've learned how to deploy Agentspace to utilize Google's combined expertise in search, generative AI, and cloud infrastructure to ease knowledge exchange throughout your organization.
